# Harshil Jain

+91 9829011410 kotaharshil2906@gmail.com LinkedIn GitHub LeetCode

## Education

**The LNM Institute of Information Technology (LNMIIT)** Jaipur, Rajasthan
*Bachelor of Technology in Electronics and Communication Engineering* ***CGPA: 7.79/10*** *2024 – 2028*

**Lord Buddha Public School** Kota, Rajasthan
*Senior Secondary (CBSE)* ***93.8%*** *2024*

**MSS Public School** Kishangarh, Rajasthan
*Secondary (CBSE)* ***95.4%*** *2022*

## Experience

**Frontend Developer Intern** Jun 2026 – Jul 2026
*AIMargdarshak* *Remote*

- Developed responsive and reusable UI components using **React.js** as part of the product frontend
- Collaborated with designers and backend developers to deliver production-ready web pages
- [Add a verified, measurable outcome here only if you can point to where the number comes from]

**Creative Lead** Jan 2026
*ASME EFx India Fest* *LNMIIT, Jaipur*

- Led a student team to design and deliver branding assets for a campus-wide technical fest
- Designed digital creatives and promotional content for event marketing
- Coordinated with multiple event teams to ensure timely delivery of creative requirements

## Projects

**AI-Powered SaaS Platform** | *Next.js, TypeScript, Node.js, PostgreSQL, Prisma, Redis, Stripe, OpenAI API, Docker*

- Built a full-stack SaaS application with JWT-based authentication, Stripe subscription billing, and per-user usage tracking
- Integrated the OpenAI API to power AI chat, document analysis, and code review features
- Designed the PostgreSQL schema with Prisma and used Redis for caching and rate-limiting
- Deployed with Docker on AWS/Vercel, including an admin panel for usage analytics

**PID-Controlled Line-Following Robot** | *CoppeliaSim, PID Control, Embedded Systems*

- Built a line-following robot simulation in CoppeliaSim as part of the eLSI Sprint (IIT Bombay), Team ID 982
- Tuned a PID controller for stable path tracking and debugged sensor noise affecting line detection
- Implemented finish-marker detection logic to stop the robot accurately at the track endpoint

**Three-Way Traffic Light Controller** | *VHDL, Embedded Systems*

- Designed a finite-state-machine-based traffic light controller for a three-way intersection in VHDL
- Implemented timing logic to sequence signal transitions across all three approaches
- Simulated and verified the design against expected state transitions before hardware mapping

## Certifications

**PCB Design Certification** – The LNM Institute of Information Technology (Software: DipTrace – Copper Paths)

**Demystifying Embedded Systems** – Embedded Systems Workshop Certificate

**PCB Design Certification (Altium)** – Altium PCB Design Software

## Achievements

**Smart India Hackathon (SIH) 2026** – Advanced to **Round 2** of the internal college selection

**Cognee: Hangover Part AI** – Cleared the first screening round

**Samsung Solve for Tomorrow 2026** – Currently participating

**eLSI Sprint, IIT Bombay** – Participating (Team ID: 982); building a PID-controlled line-following robot in CoppeliaSim

## Technical Skills

**Programming Languages:** C, C++, Python, JavaScript, TypeScript, HTML/CSS
**Frameworks & Libraries:** React.js, Next.js, Node.js, Express.js, Tailwind CSS
**ECE / Hardware Design & Simulation Tools:** VHDL, LTSpice, Tanner, Vivado, Ansys, Arduino IDE
**ECE Domains:** Embedded Systems, Robotics, IoT, PCB Design
**Developer Tools:** Git, GitHub, Vercel, VS Code
**Data Structures & Algorithms: 200+** LeetCode problems solved; strong foundation in Arrays, Strings, Linked Lists, Trees, Graphs, Dynamic Programming, Greedy, and Binary Search
**Other Skills:** REST APIs, JWT Authentication, Graphic Design
